

SUPPLEMENTARY FEED FOR HORSES

1. Description

Mixture of grain, pellets and rice bran

2. Intended use

Ideal for the following purposes:

- Weight gain
- Improved coat condition

3. Directions of use

Replace 2 kg of normal feed by 1 kg Cavalor WholeGain.

Maximum 2 kg per day

4. Product Features

Research has shown that diets high in fat can improve athletic performance, coat condition, and the general well being of the horse. Adding CAVALOR WholeGain into a feeding program can allow those horses to achieve similar results.

CAVALOR WholeGain contains a specific blend of oils which creates a beneficial ratio of omega 3 and omega 6 fatty acids. A high proportion of omega 3 fatty acids can improve immunity, reduce inflammation, and improve energy utilization.

The high oil in CAVALOR WholeGain contains twice as many calories per gram than starch or protein. Fat is a safer solution for weight gain since it does not cause undue systemic stress, such as kidney issues seen with protein-based feeds or muscle and gastrointestinal problems correlated to high starch rations.

5. Analysis

Crude Protein	12.5%
Crude Fat	22%
Crude Ash	13%
Crude Fibre	5.5%
Calcium	2.0%
Phosphor	1.3%
Vitamin C	325 ppm
Zinc	580 ppm
Manganese	580 ppm
Copper	20 ppm

6. Storage & Packaging

- Bag 20 kg
- Keep in dry and temperate conditions
