

HOOF CARE

For A Dry Frog & Sole

DRY FEET

SHAKE
BEFORE
USE

Cavalor® Dry Feet is widely used by vets, farriers, grooms and riders in the battle against soft areas in the hoof and other symptoms related to thrush. In a couple of days, the frog and sole are visibly drier.

No hoof, no horse

Thrush is a very common bacterial infection that occurs on the hoof of a horse, specifically in the region of the frog. Horses with deep clefts, or narrow or contracted heels are more at risk of developing thrush. Even if you try to keep your horse's environment as clean as possible, bacteria are always prominent. Horses often stay in a stable with manure or a wet, muddy paddock.

This atmosphere is ideal for anaerobic bacteria to live in the hoof and damage it. The erosion can allow them to invade in the sensitive structures of the hoof underneath the frog, causing lameness.

Cavalor® Dry Feet makes the hoof a less hospitable home for necrotic bacteria thanks to the combination of different active ingredients. Glutaraldehyde has an astringent (drying) and hardening effect, while Benzalkoniumchloride makes sure the product sticks to the hoof longer.

By making the hooves hard and dry, oxygen will find its way back to the area close to the frog, which will cause the death of the bacteria. Cavalor® Dry Feet can also be used as a preventative when the horse is sensitive to thrush but it is recommended to not use it on dry hooves. It will make them brittle and cause hoof cracks.

PRODUCT FOR EXTERNAL HORSE CARE

Description

Clear liquid, blue green

Directions of use

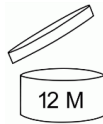

As a treatment: Spray CAVALOR® DRY FEET approximately 2 to 3 times on the cleaned hoof per application. Repeat daily for approximately 3 to 5 days until the hoof is visibly drier.

As prevention: Use CAVALOR® DRY FEET once or twice a week.

Caution: for external use only. This fluid causes irritation. Avoid contact with eyes and skin. Do not inhale. Wash hands after use.

Packaging & storage

250 ml / 8.45 fl. oz. spray

Storage tip:

Store in a dry, cool place and keep out of reach of children.
